DETAILED ACTION

Claims 1-14 and 28-39 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1, 7-11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by US# 5,770,336 to Choi.

Choi teaches a stencil mask and a method for fabricating the mask. The method includes the steps of forming a plurality of insulating film patterns on a semiconductor substrate, forming a plurality of doped regions in the semiconductor substrate, forming a conductive layer on the doped regions and the insulating film patterns, and forming a plurality of passages through the semiconductor substrate. The lithography mask includes a semiconductor substrate, a plurality of patterns formed on the semiconductor substrate, a plurality of doped regions formed in the semiconductor substrate between the patterns, a plurality of trenches formed on a lower portion of the semiconductor substrate to expose the doped regions, and a plurality of first holes each penetrating a corresponding one of the doped regions (Abstract). Because Choi teaches a doped layer, Choi teaches an ion absorbing layer. It is inherent that the membrane and stress control layer have compressive and tensile properties. Choi also teaches the recited materials for the layers.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2, 3, 5, 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US# 5,770,336 to Choi.

Choi teaches the limitations as discussed above. Choi does not specifically teach the thicknesses recited in the claims. One of ordinary skill in the art would form the specified thicknesses as these thicknesses are common in the art.

Allowable Subject Matter

3. Claims 28-39 are allowed.

4. Claims 4 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art does not teach or suggest that the stress control layer is formed with the desired combined stress or that the stress control layer has a ternary compound and is annealed.
